Computer Status - Disappearing

Escrito por crowek123 - 11/07/2018 04:41

_____

Hello,

I have recently upgraded from GLPI 9.1 to 9.2 along with the FusionInventory Plugin that goes with it. I have noticed that I seem to have an issue where the Status of Computer are being changed from their previously Locked Stated (Deployed) to Blank. I have chosen Serial Number, Inventory Number, User and Status to be locked under the FusionInventory Plugin. This was set prior to the upgrade and worked fine but now the Issue of the status field being changed to Blank seems to be a problem. Any ideas suggestions?

Any help will be apprecited.

I didn't find the right solution from the Internet.
