housing reflection issue
Escrito por crowek - 22/06/2018 11:59

Hello,

I've bought a my old Ixus 75 a Canon underwater housing (WP-DC14). I'm mainly into snorkeling by now. So far i'm prett happy with the housing except that i most of the time the housing is reflecting a lot and its really hard to see anything on the display.Any ideas how to solve this issue?I was already thinking about getting some black tape and build some kind of hood around it.

Please help.

I didn't find the right solution from the Internet.
